-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Borom (4,234,786) in view of Volbrecht (4,934,831) and further in view of Adachi et al (6,880,969).

Borom discloses a heater resistance 1 for heating a solid part, the resistance comprising an electric wire 1, and a ceramic insulating material 3. However, he does not disclose a sheath surrounding the wire.

However, Borom does not disclose a ceramic sheath comprising alumina and silica.

Volbrecht discloses a probe (col. 5, lines 36-55), the probe comprising electric wires 16 and 18, and a woven sheath-cable 12 surrounding the wires with insulation (Fig. 1 and col. 3, lines 15-25).

Adachi discloses a probe (col. 3, lines 40-47) comprising an electrically a sheath-insulated glass member 8 made of alumina and surrounding the wires -rods 4 (Fig. 2 and col. 4, lines 1-8).

It would have been obvious to one having ordinary skill in the art to modify Borom's invention to include a woven sheath as taught by Volbrecht and make it of ceramic

including alumina and silica as taught by Adachi in order to prevent short circuits (col. 1, lines 39-46) in the probe.

As to claim 13, it would have been obvious to use a method of fabricating a probe by Broom in view of Volbrecht and Adachi because they disclose all elements of the invention and capable of so perform.

Response to Arguments

3. Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.
